### Communication - ENG

### Problem-solving

### Teamwork skills

## ABOUT ME

With the knowledge and skills, I will attain from this course, the creative ideas that I could bring into fruition would be endless. I hope to become one of the computer scientists who adapt technology to help the human race evolve. One possibility would be for artificially intelligent gadgets to recognize different people and adjust to their individual needs based on personal preferences. I have been teaching myself Python, Java, C syntax in my spare time and have completed online programming courses, which have allowed me to explore the endless possibilities that computer science can bring to the world. I have also learned to create a simple Web using HTML, Javascript, PHP syntax, and also I'm doing an e-commerce web as a freelancer called Jade Emporium (a start-up company in the jewelry) using ReactJs .

I am constantly seeking to learn new skills and gain experience from various activities. Technological advancements take place around us every day, from the evolution of bulky antenna phones into smartphones to the introduction of smart virtual assistants such as Apple's Siri, Google Now, and Windows's Cortana. I am inspired by the fact that computer science has become a fundamental element in the development of a better, smarter future for our world and my goal is to be part of that development process.
